DANGER

For safe operation, the machine MUST be properly grounded to prevent electrical shock. Do NOT immerse the equipment in water. Unplug the machine before cleaning or servicing.

DANGER

Improper alteration, servicing, or maintenance of this equipment can cause property damage, injury, or death. Ensure the operator is familiar with the safe operation of this machine, and do NOT attempt to make any repairs or alterations.

SERIOUS RISK OF INJURY OR DEATH

This device includes a motorized blade to shave ice. Keep hands and fingers away from the shaving unit and the ice feed (gooseneck) tube. Failure to do so can result in serious injury, dismemberment, or death. This unit should never be operated by a minor.

Safety Information:

- This machine is designed to handle ice cubes or chunks no larger than 4 inches (10.6cm).
- The design of the ice feeder automatically pulls the ice into the shaver. No manual pushing is needed.
- The motor will only run when the button is pressed.
- Keep the motor and control panel dry. Do not use the control panel if your hands are wet.

Operating the Machine:

1. Set the cabinet on the drip tray. Make sure to put the drain hole over a bucket or other area that can accept any draining liquid from the machine. Melted ice and condensation go into the drip tray.
2. Plug in machine.
3. Push and hold the motor button. Wait for the motor to come to full speed.
4. Fill the chute to within an inch of the top with ice cubes or block ice.
5. Push the pusher handle down against the ice in the chute. Apply firm and even pressure to make the best snow (too much pressure will result in snow that is rough/coarse.)
6. Repeat steps 3 - 6 until you have enough shaved ice.
7. Scoop ice into the paper cone, and apply 1-1½ pumps of syrup.
